

CLAIMS

What is claimed is:

5 54³
A17 1. A system for authoring, distributing, and replaying derivative hypermedia content, said system comprising:
an authoring system for recording dynamic annotations;
a distribution system for distributing said dynamic annotations which have been recorded in the preceding step; and
a playing system for playing said dynamic annotations which have been distributed
10 in the preceding step.

15 2. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 1, wherein said authoring system for recording dynamic annotations comprises:
a system for capturing navigation events.

20 3. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 2, wherein said playing system for playing said dynamic annotations comprises:

a system for playing said navigation events.

25 4. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 1, wherein said dynamic annotations are recorded on hypermedia.

5. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 4, wherein hyperlinks may be created and followed between said dynamic annotations.

6. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 5, including a hypermedia browser, said authoring and playing systems being included in said hypermedia browser and said distribution system being in part comprised in said hypermedia browser.

5 7. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 6, including a remote annotation server.

8. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 7, wherein said distribution system is partly comprised within said hypermedia browser and partly within said remote
10 annotation server.

9. A system for authoring, distributing, and replaying derivative hypermedia content in accordance with claim 8, wherein said remote annotation server further comprises an annotation store, and a mechanism for indexing, retrieving and transferring annotation files.

15 sub 7
A2 10. A system, for use with a communications web or net, said net comprising at least one of the Internet and an Intranet, said system being for authoring, distributing, and replaying derivative hypermedia content, said system comprising:
an annotation server for being coupled to said communications net;
a remote net server for being coupled to said communications web; and
20 a net browser for being coupled to said communications web.

sub
B11 25 A system in accordance with claim 10, wherein said net browser comprises:
a system for capturing navigation events.

12. A system in accordance with claim 11, wherein said annotation server comprises an annotation store.

13. A system in accordance with claim 10, in which hyperlinks may be created and followed between annotations.

5 14. A system in accordance with claim 13, wherein said net browser comprises traditional hypermedia browser components, an annotation manager, an annotation recorder, and an annotation player.

10 15. A system in accordance with claim 10, wherein said system has a selectable Browse operating mode wherein said net browser functions in a traditional hypermedia browser manner, an Annotate mode wherein events generated by a user are recorded, and a Watch mode wherein a most recent annotation is played.

16. A system in accordance with claim 10, wherein said system displays available annotations for each document that a user visits.

15 <sup>sub
B3</sup> 17. A method for use with a communications web or net, said net comprising at least one of the Internet and an Intranet, said method being for authoring, distributing, and replaying derivative hypermedia content, wherein said method comprises:

coupling each of at least one remote server, an annotation server, an annotation manager, and a net browser to said communications net; and

20 selecting one of a Browse mode, an Annotate mode, and a Watch mode for respectively causing said net browser to function in a traditional hypermedia browser manner, causing events generated by a user to be recorded, and for causing a most recent annotation to be displayed.

25 <sup>sub
B1</sup> 18. A method in accordance with claim 17, wherein said causing events generated by a user to be recorded includes causing navigation events to be recorded.

MK 19 ~~18~~

A method in accordance with claim 17, wherein said causing a most recent annotation to be displayed includes causing navigation events to be displayed.

MK 5 20 ~~19~~

A method in accordance with claim 17, wherein said Browse mode, said Annotate mode, and said Watch mode are selectable by screen button functions.

MK 21 ~~20~~

A method in accordance with claim 17, comprising the steps of, when said Annotate mode is selected for recording events:

selecting one of a drawing mode and a typing mode.

MK 10 22 ~~21~~
sub
A11

A method in accordance with claim 17, comprising the step of, upon selection of an icon or text representing an annotation:
generating a link annotation event using the annotation ID of said item selected.

MK 23 ~~22~~
sub
B11

A method in accordance with claim 17, comprising the steps of, when said Annotate mode is selected for recording events, and upon one of (a) selection of an item in an Annotation box, and (b) generation of a non-scroll navigation event:

pausing recording of annotation;

loading a document with given ID;

rendering said document by said net browser; and

resuming recording of annotation.

MK 20 24 ~~23~~

A method in accordance with claim 17, comprising the steps of, when said Browse mode is selected and upon activation of a save function:

entering information including a user-selected name associated with a most recent annotation;

generating an annotation file;

25

sending said name and said annotation file to said annotation server;

extracting document ID's from NEW_DOCUMENT events in said
annotation; and

storing a file with said information in an Annotation Store indexed by said
document ID's.

5

23
MK 25 ~~24.~~ A method in accordance with claim ~~22~~, comprising the steps of, when said
Browse mode is selected and upon execution of a non-scroll navigation event
which causes a new document to be loaded by the browser:

10 said Annotation manager sending an ID of said new document to said
Annotation server; upon said Annotation server finding any annotations stored for
said ID of a new document, said Annotation server sending annotation files along
with any associated names and icons to said Annotation Manager, said Annotation
Manager displaying annotation's name, author's name if any, and icon if any, of
each annotation in an Annotation Manager box.

25
MK 15 26 ~~25.~~ A method in accordance with claim ~~24~~, comprising the steps of, when said
Browse mode is selected, and upon execution of a non-scroll navigation event
which causes a new document to be loaded by the browser:

said Annotation manager sending an ID of a new document to said Annotation
server;

20 upon said Annotation server finding no annotations stored for said ID of a new
document, said Annotation alerting said Annotation Manager that there are no
annotations for a current page.

24
MK 27 ~~26.~~ A method in accordance with claim 17, comprising the steps of, when said
Watch mode is selected:

25 processing events in a traditional manner in a Main Annotation Playback
Loop.

28. A method in accordance with claim 27, comprising the steps of, when said Watch mode is selected, and upon processing of a non-scroll navigation event, pausing playback of annotation; loading a document having a selected ID; rendering said document; and continuing playback of said annotation.

29. A method in accordance with claim 28, comprising the steps of: if said playback is complete, verifying whether an Annotation Stack is empty and, if so, switching to said Browse mode and, if not, taking the top annotation from said stack and beginning playback from the designated event.

30. A method in accordance with claim 29, comprising the steps of, when said Watch mode is selected, and upon processing of a link annotation event, creating a temporary Link Button which remains available to the user for a pre-determined length of time.

31. A method in accordance with claim 30, comprising the steps of, when said Watch mode is selected, and upon activating said Link Button, placing the ID of the active annotation, along with the index of the next event in the active annotation on the top of the stack; beginning playback of an annotation referenced in the most recent link annotation event.

32. A method in accordance with claim 31 comprising the steps of: if said playback is complete,

verifying whether an Annotation Stack is empty and, if so,
switching to said Browse mode and, if not, taking a top annotation from said stack
and beginning playback from a designated event.
